

HX10M 680

LIFTING STABILITY

HX10

The HX10 series, which is available in both a manual and an electric version, allows for easy and light lifting to a height of 800 mm, thus becoming a practical work platform, which is suitable for places such as machine workshops. This pallet truck is also able to carry out the support function and material supply along the assembly and production lines.

CONTROL LEVER

The redesigned hydraulic unit allows for less effort at the steering wheel for all loads and a quick elevated function (30 cycles) for loads up to 150 kg.

EMERGENCY PUSHBUTTON

The emergency pushbutton with a battery cut-off (isolator) switch function and an off-load valve allows for a smoother lowering of the load; these are some of the devices that make the work safer and more efficient.

FRONT AND REAR STABILISERS

The new control linkage makes the entry onto the closed side of the pallet possible by slight lifting, which facilitates the successive handling phases. Furthermore, more machine stability has been obtained using load rollers in a more advanced position and by providing front stabilisers as a standard.

Rear stabilizers, in turn, render work stable and safe even in the case of elevated loads once the 400 mm of lifting up have been exceeded.

PHOTO AUTO LEVELING SYSTEM

- An automatic system which, by means of a photocell, adjusts the height of the forks, thus maintaining the work height set.
- An optical and acoustic signal is activated at every fork movement.
- Possibility of adjusting the photocell both in height and reading angle.
- Micro-switch, active both on the way up to prevent superfluous absorption of energy and on the way down to protect the operator.

Description

1.1 Manufacturer	LIFTER		
1.3 Drive	Manual
