

MASE MARINER1680T THREE-PHASE MARINE GENERATOR 16,8KVA 60Hz

Product description:

MASE MARINER1680T THREE-PHASE MARINE GENERATOR 16,8KVA 60Hz

MASE MARINER1680T single/three-phase marine generator equipped with a YANMAR 3TNV80F engine, powered by diesel and capable of delivering a maximum power of 16.8 KW at 1800 rpm.

The MASE MARINER1680T alternator is a 4-pole synchronous, self-regulated, self-excited, brushless, which in conjunction with the YANMAR engine can deliver a maximum power of 16,8KVA. The rotor and the stator are coated with epoxy paint to prevent the attack of atmospheric agents, in addition it is equipped with safety systems of self-stop in case of high temperatures detected on the windings. The alternator is complete with AVR voltage regulator that ensures the stability of the voltage delivered by the marine generator, delivering current like the home one.

The control panel of the marine generator MASE MARINER1680T has been designed in order to reduce, in a single panel, the commands, controls and protections. The elements that compose it are:

- Engine protection module for automatic shutdown in case of high water temperature, low oil pressure, high alternator temperature;
- Hour meter;
- Circuit breaker for protection in case of overload or short circuit;
- Thermal circuit breaker for DC circuit protection.

The AVR of the MASE MARINER1680T is an electronic device capable of automatically regulating the voltage and possibly the frequency and/or the electric current according to set values. These values can be modified or bound to the technical characteristics of the regulator itself.

Basically, thanks to an AVR, the alternating current coming from the alternator is regulated and transformed into direct current at constant voltage.
