## **Product description:**

CGM 6000SP GENERATOR 6KVA SINGLE PHASE STAGEV SILENT AVR

Generator Single-phase CGM 6000SP with STAGEV petrol engine at 3000 rpm, capable of delivering a maximum power of 6 KVA, with transport trolley supplied as standard, complete with AVR voltage regulator.

CGM 6000SP is characterized by lower consumption and a longer life expectancy than the petrol-powered range. The generator consists of a self-excited alternator with brushes and with **AVR** voltage regulator. CGM 6000SP generator has a low fuel consumption, in fact it consumes only 1.8 liters / hour at 75% of load for an autonomy of more than 13.9 hours of operation.

### STAGEV EMISSIONS REGULATION

The generating set is equipped with a "mobile" STAGEV motorization, as required by European Regulation 2016/1628. These new engines make it possible to exponentially reduce the emissions of particulate matter and nitrogen oxides delivered by CGM 6000SP into the environment, and ensure a reduction in the environmental impact of 200% compared to standard engines.

## AVR VOLTAGE REGULATOR

Its operation is very simple when resistive loads are powered, more complex is the situation in the case of mainly inductive loads: the delayed phase current contrasts inductor magnetic field, causing a voltage drop at output terminals of alternator; to compensate for the phenomenon, the AVR intervenes automatically by increasing the excitation current, until output returns to the nominal value. If the load is instead capacitive, the current acts as a magnetizer for the inductor causing an increase in the output voltage, and the AVR intervenes by reducing the excitation
