

FISCHER PANDA Parallel Switchgear 30x - 400 V / 12 V DC - 25.5kW

Product price:

3.645,41 € tax excluded

Product description:

The Fischer Panda parallel panel is designed to connect two Fischer Panda generators in parallel.

The unit can be used to synchronize both generators to switch the load from one generator to another or to operate both generators in parallel during peak load periods.

Parallel power units can be combined with the automatic AC transfer unit in a single housing upon request.

The parallel transfer unit does not have load sharing capabilities for safety reasons. Both generators are coupled and operate together as a single unit.

To increase operational safety, both generators are shut down in the event of a system failure.

Product features:

Product type: Switching Frame
