

FISCHER PANDA Parallel Transfer Unit 25.5 kW - 40 kW

Product description:

Load switching or doubling power output for Basic and Premium Line Generators

The Fischer Panda unit is designed for connecting two Fischer Panda AC generators in parallel. The unit can be used to synchronize both generators to switch the load from one generator to another or operate both generators in parallel during peak load periods.

A range of units are available to suit varying generator types and power requirements up to 100 kW per generator.

The parallel power units can be combined with the automatic AC transfer unit into a single housing on request.

The parallel transfer unit does not feature loadsharing capabilities for safety reasons. Both generators are coupled and operate together as one unit.

To increase operational safety, both generators are shut down if a system failure occurs.

Product features:

Product type: Switching Frame
